### **Abstract**

#### **Feelings of happiness in relation to life orientation among a sample physically disabled people hurt by the Israeli aggression in Gaza**

The current study aims at showing the relationship between feeling of happiness and life orientation among a sample of physically disabled people hurt by the Israeli war on Gaza. It also aims to know if there is any statistically significant relationship between the average of student's scores on feeling of happiness scale and life orientation scale attributed to (sex, disability degree). The sample of the study consists of (122) male and female physically disabled students joining the continuing education in the Islamic university. The study utilized two self's developed sales: feeling of happiness scale and life orientation scale among a sample physically disabled people hurt by the Israeli aggression in Gaza. The study related that there was a statistically correlational relationship between the feeling of happiness and life orientation. The study also concluded that there were no statistically significant differences between the students' scores related to feeling of happiness and life orientation scales. Attributed to sex (i.e. male and female) Additionally, the results showed that there were statistically significant differences between the students' sores average on the two scales attributed to age variable (i.e. 21-30 years old) it also showed that were a statistically significant differences between students' scores on feeling of happiness and life orientation scales attributed to( disability degree) between the medium and a very significant in favor of the very big and between significant the and a very significant in favor of the very big and between the simple and a very big in favor of the big.

**Key Words:** Feelings of happiness , life orientation among , physically disabled, Affected by the Israeli aggression on Gaza
